SATURDAY	wP till 12h.; vari- ably sN and wP till 17h.; then wP.	12.0	16.5	Variably cloudy. Showers at 11h.; 16h.; and 16h. Rain at 12h.; and 18h. till 13h.
No. of Col. . .	26	Sum 61.9	Sum 115.7	28

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1913.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P, positive; N, negative; w, weak; m, moderate; s, strong; v, variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer increased from 29.77 ins. at the beginning of the week to 29.85 ins. by 10h. on 24th; decreased to 29.29 ins. by 11h. on 26th; increased to 30.06 ins. by 5h. on 28th; decreased to 29.70 ins. by 10h. on 29th.; increased and was 29.83 ins. by midnight on the 30th.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 7TH JULY, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the twenty-seventh week of the year numbered 7,246 corresponding to an annual rate of 19·2 per 1,000 living: stillbirths numbered 308 corresponding to a rate of 41 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,615 (205 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				June 16.	June 23.	June 30.	July 7.
107 Great Towns	10·3	10·0	10·1	9·6
London	9·9	9·7	10·1	9·0
Birmingham	10·2	10·1	10·7	9·4
Liverpool	11·1	10·5	10·4	10·3
Manchester	11·4	11·2	11·7	10·3
Sheffield	9·8	11·6	10·3	10·0
Leeds	11·3	11·3	11·8	9·6
Bristol	9·5	8·7	9·7	6·8
West Ham	12·2	7·9	8·8	8·9

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 54 against 62, 51 and 48 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,494 live births corresponding to an annual rate of 17·1 per 1,000 living: stillbirths numbered 54 corresponding to a rate of 35 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 780 (96 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 51 against 49, 47, and 41 in the three weeks preceding.

BELFAST† ..	415,151	186	?	111	9	1	3	-	1	1	1	-

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week: those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

DATE.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.	
SUNDAY	1	10.2	16.5	Overcast till 5h.; very cloudy till 12h.; nearly overcast till 17h.; then partially cloudy. Solar halo 14h. till 15h.	<p>The results apply to the Civil Day or from midnight to midnight.</p> <p>The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.</p> <p>Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.</p> <p>The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1913.</p> <p>In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.</p> <p>The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.</p> <p>The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P, positive; N, negative; w, weak; m, moderate; s, strong; v, variable.</p> <p>The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.</p> <p>The reading of the barometer increased from 29.93 ins. at the beginning of the week to 29.97 ins. by 10h. on 1st; decreased to 29.78 ins. by 16h. on 3rd; increased to 29.93 ins. by 13h. on 4th; decreased to 29.61 ins. by 2h. on 6th; increased and was 30.06 ins. by midnight on the 7th</p>
MONDAY	2	7.8	16.5	Variably cloudy.	
TUESDAY	3	6.3	16.5	Variably cloudy, becoming overcast by 12h. Damping 16h. till 17h. Rain from 17h.	
WEDNESDAY	4	9.8	16.4	Overcast till 6h.; variably cloudy till 20h.; then overcast. Rain till 2h.	
THURSDAY	5	8.8	16.4	Variably cloudy, becoming overcast by 15h. Brisk wind 11h. till 16h. Slight rain from 22h.	
FRIDAY	6	4.5	16.4	Variably cloudy till 9h.; nearly overcast till 19h.; partially cloudy till 22h.; then overcast. Damping 2h. and 11h. Brisk wind 12h. till 19h.	
SATURDAY	7	7.5	16.4	Nearly overcast till 6h.; then variably cloudy. Dew at night.

WEEKLY RETURN OF
BIRTHS AND DEATHS

REGISTERED IN COUNTY BOROUGHES
AND OTHER GREAT TOWNS AND
OF CASES OF CERTAIN SPECIFIED

INFECTIOUS DISEASES

NOTIFIED IN BOROUGHES, URBAN &
RURAL DISTRICTS & PORT SANITARY
DISTRICTS IN ENGLAND AND WALES
DURING THE WEEK ENDED

**SATURDAY, 14TH JULY,
1928**

LONDON:

PRINTED AND PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE.

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Adastral House, Kingsway, London, W.C.2; 120, George Street, Edinburgh:

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff:

15, Donegall Square West, Belfast;

or through any Bookseller.

1928.

Price 6d. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 14TH JULY, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the twenty-eighth week of the year numbered 6,793 corresponding to an annual rate of 18·0 per 1,000 living: stillbirths numbered 297 corresponding to a rate of 42 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,796 (181 more than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				June 23.	June 30.	July 7.	July 14.
107 Great Towns	10·0	10·1	9·6	10·1
London	9·7	10·1	9·0	9·8
Birmingham	10·1	10·7	9·4	9·4
Liverpool	10·5	10·4	10·3	9·9
Manchester	11·2	11·7	10·3	10·1
Sheffield	11·6	10·3	10·0	11·1
Leeds	11·3	11·8	9·6	10·7
Bristol	8·7	9·7	6·8	7·3
West Ham	7·9	8·8	8·9	8·9

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 52 against 51, 48 and 54 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,464 live births corresponding to an annual rate of 16·8 per 1,000 living: stillbirths numbered 52 corresponding to a rate of 34 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 852 (72 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 50 against 47, 41, and 51 in the three weeks preceding.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

DATE.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours	GENERAL REMARKS.	
SUNDAY	8	10.5	16.3	Cloudless or little cloud till 9h.; becoming nearly overcast by 10h. Variably cloudy 12h. till 20h. then overcast. Mist and dew in morning. Drizzle 23h. Aurora 1h. till dawn; maximum phase 1h. 26m.	<p>The results apply to the Civil Day or from midnight to midnight.</p> <p>The height of the cistern of the barometer is 182 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.</p> <p>Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.</p> <p>The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 60 years ending 1915.</p> <p>In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.</p> <p>The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.</p> <p>The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.</p> <p>The numbers in column 27 derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.</p> <p>The reading of the barometer decreased from 30.06 ins. at the beginning of the week to 29.80 ins. by 4h. on 8th; increased to 30.11 ins. by 9h. on 11th; decreased to 29.98 ins. by 13h. on 12th; increased to 30.14 ins. by 8h. on 14th.; decreased and was 30.09 ins. by midnight on the same day.</p>
MONDAY ..	9	9.7	16.3	Overcast till 8h.; then partially cloudy generally. Rain 5h. till 7h. Solar halo 18h. till 18h.; mist in morning.	
TUESDAY ..	10	12.3	16.3	Cloudless till 3h.; partially cloudy till 9h.; then nearly overcast with thin cloud.	
WEDNESDAY 11		14.9	16.3	Overcast till 1h.; variably cloudy till 10h.; partially cloudy till 13h.; then cloudless.	
THURSDAY 12		15.3	16.2	Nearly cloudless throughout. Mist in morning.	
FRIDAY .. 13		14.8	16.2	Nearly cloudless till 9h.; variably cloudy till 17h.; then nearly cloudless. Mist in morning.	
SATURDAY 14		15.0	16.1	Cloudless generally. Haze till 20h.

STATISTICAL REVIEW.

The Registrar General's Statistical Review of
England and Wales for the Year 1926.

TABLES. PART I. MEDICAL.

This volume of nearly 500 closely printed pages contains classified in 31 separate 'Tables,' a wealth of Statistical data relating to public mortality. The figures given for the year 1926 give exhaustive information relating to the mortality of the population for more than 200 diseases &c. analysed by sex into age groups, together with a mass of other figures on other aspects of public health, e.g., infectious diseases, infant mortality, violent deaths, &c., &c.

Price 15s. net. Post Free 15s. 6d.

TABLES. PART II. CIVIL.

This volume contains the following statistics :—
Populations of United Kingdom and Ireland, British Dominions, Colonies and Possessions, and Foreign Countries; and for England and Wales, Births by sex and legitimacy, Marriages by age and civil condition, Divorces, Parliamentary and Local Government Electors by sex, and particulars of changes in boundary of poor law and administrative areas.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 21st JULY, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the twenty-ninth week of the year numbered 6,784 corresponding to an annual rate of 17·9 per 1,000 living: stillbirths numbered 270 corresponding to a rate of 38 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,536 (262 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	June 30.	July 7.	July 14.	July 21.
107 Great Towns	10·1	9·6	10·1	9·4
London	10·1	9·0	9·8	9·9
Birmingham	10·7	9·4	9·4	8·0
Liverpool	10·4	10·3	9·9	10·6
Manchester	11·7	10·3	10·1	10·2
Sheffield	10·3	9·9	11·6	9·5
Leeds	11·8	9·6	10·7	9·1
Bristol	9·7	6·8	7·3	9·6
West Ham	8·8	8·9	8·9	8·8

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 45 against 48, 54 and 52 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,468 live births corresponding to an annual rate of 16·8 per 1,000 living: stillbirths numbered 53 corresponding to a rate of 35 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 860 (10 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 43 against 41, 51, and 50 in the three weeks preceding.

DEATHS FROM SMALL-POX.

Formerly the record of deaths from small-pox published in the weekly return was restricted to cases belonging to the County Boroughs and Great Towns (including Greater London). A supplementary statement, first shown in the return for the week ended 19th May 1928, is now published at monthly intervals giving particulars of other deaths in England and Wales from small-pox, while the complete quarterly record will appear, as usual, in the quarterly return.

The returns received for the month of June last include in addition to the deaths already shown in the weekly return, 6 deaths certified as due to small-pox either as principal or contributory cause. These deaths have been provisionally classed to small-pox and assigned to the following areas:—

Devonshire Ilfracombe U.D.	1
Norfolk King's Lynn M.B.	2
Oxfordshire Thame U.D.	1
Yorkshire, West Riding Keighley R.D.	1
Glamorganshire Gelligaer U.D.	1

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

The results apply to the Civil Day or from midnight to midnight. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level. Observations are usually taken at 9h. A.M. noon, 3h. P.M. and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry. The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1919. In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average. The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined. The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P, positive; N, negative; w, weak; m, moderate; s, strong; v, variable. The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day. The reading of the barometer decreased from 30.09 ins. at the beginning of the week to 29.97 ins. by 16h. on 15th; increased to 30.23 ins. by 8h. on 17th; decreased generally and was 30.03 ins. by midnight on the 21st.

STATISTICAL REVIEW.

The Registrar General's Statistical Review of
England and Wales for the Year 1926.

TABLES. PART I. MEDICAL.

This volume of nearly 500 closely printed pages contains classified in 31 separate 'Tables,' a wealth of Statistical data relating to public mortality. The figures given for the year 1926 give exhaustive information relating to the mortality of the population for more than 200 diseases &c. analysed by sex into age groups, together with a mass of other figures on other aspects of public health, e.g., infectious diseases, infant mortality, violent deaths, &c., &c.

Price 15s. net. Post Free 15s. 6d.

TABLES. PART II. CIVIL.

This volume contains the following statistics :—
Populations of United Kingdom and Ireland, British Dominions, Colonies and Possessions, and Foreign Countries; and for England and Wales, Births by sex and legitimacy, Marriages by age and civil condition, Divorces, Parliamentary and Local Government Electors by sex, and particulars of changes in boundary of poor law and administrative areas.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 28TH JULY, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the thirtieth week of the year numbered 6,759 corresponding to an annual rate of 17·9 per 1,000 living: stillbirths numbered 276 corresponding to a rate of 39 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,592 (56 more than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				July 7.	July 14.	July 21.	July 28.
107 Great Towns	9·6	10·1	9·4	9·5
London	9·0	9·8	9·9	9·0
Birmingham	9·4	9·4	8·0	9·9
Liverpool	10·3	9·9	10·6	11·6
Manchester	10·3	10·1	10·2	10·0
Sheffield	9·9	11·6	9·5	9·1
Leeds	9·6	10·7	9·1	11·3
Bristol	6·8	7·3	9·6	10·3
West Ham	8·9	8·9	8·8	10·7

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 53 against 54, 52 and 45 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,505 live births corresponding to an annual rate of 17·2 per 1,000 living: stillbirths numbered 39 corresponding to a rate of 25 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 787 (74 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 46 against 51, 50, and 43 in the three weeks preceding.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week: those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 8h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1915.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P, positive; N, negative; w, weak; m, moderate; s, strong; v, variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The readings of the barometer decreased generally from 30.03 ins. at the beginning of the week to 29.41 ins. by 5h. on 28th; increased and was 29.54 ins. by midnight on the same day.

STATISTICAL REVIEW.

The Registrar General's Statistical Review of
England and Wales for the Year 1926.

TABLES. PART I. MEDICAL.

This volume of nearly 500 closely printed pages contains classified in 31 separate 'Tables,' a wealth of Statistical data relating to public mortality. The figures given for the year 1926 give exhaustive information relating to the mortality of the population for more than 200 diseases &c. analysed by sex into age groups, together with a mass of other figures on other aspects of public health, e.g., infectious diseases, infant mortality, violent deaths, &c., &c.

Price 15s. net. Post Free 15s. 6d.

TABLES. PART II. CIVIL.

This volume contains the following statistics :—
Populations of United Kingdom and Ireland, British Dominions, Colonies and Possessions, and Foreign Countries; and for England and Wales, Births by sex and legitimacy, Marriages by age and civil condition, Divorces, Parliamentary and Local Government Electors by sex, and particulars of changes in boundary of poor law and administrative areas.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute polio-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 4TH AUGUST, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the thirty-first week of the year numbered 6,951 corresponding to an annual rate of 18·4 per 1,000 living: stillbirths numbered 295 corresponding to a rate of 41 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,442 (150 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				July 14.	July 21.	July 28.	Aug. 4.
107 Great Towns	10·1	9·4	9·5	9·1
London	9·8	9·9	9·0	9·1
Birmingham	9·4	8·0	9·9	9·4
Liverpool	9·9	10·6	11·6	9·5
Manchester	10·1	10·2	10·0	10·7
Sheffield	11·6	9·5	9·1	8·9
Leeds	10·7	9·1	11·3	9·5
Bristol	7·3	9·6	10·3	7·3
West Ham	8·9	8·8	10·7	8·3

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 54 against 52, 45 and 53 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,481 live births corresponding to an annual rate of 17·0 per 1,000 living: stillbirths numbered 43 corresponding to a rate of 28 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 792 (5 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 48 against 50, 43, and 46 in the three weeks preceding.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly mates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally rected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of the residents reported from elsewhere in Scotland during the week; those in Dublin Registration a and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions n without the respective areas.

The results apply to the Civil Day or from midnight to midnight. The height of the cistern of the barometer is 162 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level. Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric tables, issued by the Air Ministry. The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1903. In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average. The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined. The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable. The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day. The reading of the barometer increased from 29.54 ins. at the beginning of the week to 29.74 ins. by 12h. on July 30th; decreased to 29.65 ins. by 4h. on July 31st; increased generally to 30.03 ins. by 11h. on August 2nd; decreased to 29.70 ins. by 6h. on August 4th; increased and was 29.92 ins. by midnight on the same day.

STATISTICAL REVIEW.

The Registrar General's Statistical Review of
England and Wales for the Year 1926.

TABLES. PART I. MEDICAL.

This volume of nearly 500 closely printed pages contains classified in 31 separate 'Tables,' a wealth of Statistical data relating to public mortality. The figures given for the year 1926 give exhaustive information relating to the mortality of the population for more than 200 diseases &c. analysed by sex into age groups, together with a mass of other figures on other aspects of public health, e.g., infectious diseases, infant mortality, violent deaths, &c., &c.

Price 15s. net. Post Free 15s. 6d.

TABLES. PART II. CIVIL.

This volume contains the following statistics :—
Populations of United Kingdom and Ireland, British Dominions, Colonies and Possessions, and Foreign Countries; and for England and Wales, Births by sex and legitimacy, Marriages by age and civil condition, Divorces, Parliamentary and Local Government Electors by sex, and particulars of changes in boundary of poor law and administrative areas.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute polio-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 11TH AUGUST, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the thirty-second week of the year numbered 5,823 corresponding to an annual rate of 15·4 per 1,000 living: stillbirths numbered 254 corresponding to a rate of 42 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,413 (29 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	July 21.	July 28.	Aug. 4.	Aug. 11.
107 Great Towns	9·4	9·5	9·1	9·0
London	9·9	9·0	9·1	8·3
Birmingham	8·0	9·9	9·4	9·1
Liverpool	10·6	11·6	9·5	10·5
Manchester	10·2	10·0	10·7	8·7
Sheffield	9·5	9·1	8·9	8·0
Leeds	9·1	11·3	9·5	8·5
Bristol	9·6	10·3	7·3	6·9
West Ham	8·8	10·7	8·3	8·6

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 52 against 45, 53 and 54 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,337 live births corresponding to an annual rate of 15·3 per 1,000 living: stillbirths numbered 45 corresponding to a rate of 33 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 724 (68 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 49 against 43, 46, and 48 in the three weeks preceding.

Belfast ..	415,151	195	?	103	11	-	5	-	2	-	3	-

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week: those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 162 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1918.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -F, positive; N, negative; w, weak; m, moderate; s, strong; v, variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer increased from 28.92 ins. at the beginning of the week to 30.09 ins. by 11h. on 8th; decreased to 28.78 ins. by 1h. on 8th; increased to 30.02 ins. by 8h. on 8th; decreased generally and was 29.56 ins. by midnight on the 11th.

STATISTICAL REVIEW.

The Registrar General's Statistical Review of
England and Wales for the Year 1926.

TABLES. PART I. MEDICAL.

This volume of nearly 500 closely printed pages contains classified in 31 separate 'Tables,' a wealth of Statistical data relating to public mortality. The figures given for the year 1926 give exhaustive information relating to the mortality of the population for more than 200 diseases &c. analysed by sex into age groups, together with a mass of other figures on other aspects of public health, e.g., infectious diseases, infant mortality, violent deaths, &c., &c.

Price 15s. net. Post Free 15s. 6d.

TABLES. PART II. CIVIL.

This volume contains the following statistics :—
Populations of United Kingdom and Ireland, British Dominions, Colonies and Possessions, and Foreign Countries; and for England and Wales, Births by sex and legitimacy, Marriages by age and civil condition, Divorces, Parliamentary and Local Government Electors by sex, and particulars of changes in boundary of poor law and administrative areas.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 18TH AUGUST, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the thirty-third week of the year numbered 7,139 corresponding to an annual rate of 18·9 per 1,000 living: stillbirths numbered 299 corresponding to a rate of 40 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,478 (65 more than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	July 28.	Aug. 4.	Aug. 11.	Aug. 18.
107 Great Towns	9·5	9·1	9·0	9·2
London	9·0	9·1	8·3	8·7
Birmingham	9·9	9·4	9·1	9·7
Liverpool	11·6	9·5	10·5	10·0
Manchester	10·0	10·7	8·7	9·7
Sheffield	9·1	8·9	8·0	9·2
Leeds	11·3	9·5	8·5	10·0
Bristol	10·3	7·3	6·9	9·3
West Ham	10·7	8·3	8·6	9·1

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 49 against 53, 54 and 51 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,605 live births corresponding to an annual rate of 18·4 per 1,000 living: stillbirths numbered 48 corresponding to a rate of 29 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 760 (36 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 43 against 46, 48, and 49 in the three weeks preceding.

MONTHLY STATEMENT OF DEATHS FROM SMALL-POX.

There was no death from small-pox in the returns received for the month of July last.

Table 1.—107 COUNTY BOROUGHES and }

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week: those in Dublin Registration area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

DATE. AUGUST.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	GENERAL REMARKS.	
			Sun above Horizon in hours	
SUNDAY ..	12 wP till 2h.; vari- ably mP and sN till 5h.; then wP.	5.9	14.7	Nearly overcast generally till 15h.; then variably cloudy becoming nearly cloudless by 20h. Rain 2h. till 3h.; 9h. till 10h.; and about 15h. Thunder and lightning 1h. till 3h.
MONDAY ..	13 wP	8.0	14.7	Variably cloudy becoming nearly cloudless by 2h. Showers at 8h.; 9h.; 12h. and 12h. Rain 11h. till 12h. Brisk wind 13h. till 18h. Solar halo 15h.
TUESDAY ..	14 wP	11.8	14.6	Partially cloudy till 9h.; variably cloudy till 20h.; then nearly cloudless. Showers at 2h.; 6h.; and 11h. Brisk wind 12h. till 16h.
WEDNESDAY	15 wP	8.6	14.6	Variably cloudy. Dew in morning.
THURSDAY	16 wP	4.9	14.5	Variably cloudy becoming nearly over- cast by 12h. Very slight rain at 12h. Mist about 5h.
FRIDAY ..	17 wP	7.2	14.5	Cloudy till 7h.; nearly overcast till 12h.; then variably cloudy.
SATURDAY	18 wP	6.7	14.4	Variably cloudy till 14h.; partially cloudy till 20h.; then becoming cloud- less by 21h. Dew and slight mist in morning.
No. of Col. ..		26	27	28
		Sum 53.1	Sum 102.0	

The results apply to the Civil Day or from midnight to midnight.
The height of the eastern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.
Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.
The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 45 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1919.
In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.
The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.
The record of Electricity is derived from Thomson's self-registering Electrometer s. strong; v. variable.
The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.
The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day. 29.55 ins. at the beginning of the year. The reading of the barometer increased generally from 29.55 ins. at the beginning of the year to 28.49 ins. by 21h. on 17th; decreased and was 28.85 ins. by midnight on the 18th.

STATISTICAL REVIEW.

The Registrar General's Statistical Review of
England and Wales for the Year 1926.

TABLES. PART I. MEDICAL.

This volume of nearly 500 closely printed pages contains classified in 31 separate 'Tables,' a wealth of Statistical data relating to public mortality. The figures given for the year 1926 give exhaustive information relating to the mortality of the population for more than 200 diseases &c. analysed by sex into age groups, together with a mass of other figures on other aspects of public health, e.g., infectious diseases, infant mortality, violent deaths, &c., &c.

Price 15s. net. Post Free 15s. 6d.

TABLES. PART II. CIVIL.

This volume contains the following statistics :—
Populations of United Kingdom and Ireland, British Dominions, Colonies and Possessions, and Foreign Countries; and for England and Wales, Births by sex and legitimacy, Marriages by age and civil condition, Divorces, Parliamentary and Local Government Electors by sex, and particulars of changes in boundary of poor law and administrative areas.

1928**

LONDON:

PRINTED AND PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE.

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Adastral House, Kingsway, London, W.C.2; 120, George Street, Edinburgh;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

15, Donegall Square West, Belfast;

or through any Bookseller.

1928.

Price 6d. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 25TH AUGUST, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the thirty-fourth week of the year numbered 6,413 corresponding to an annual rate of 17·0 per 1,000 living: stillbirths numbered 244 corresponding to a rate of 37 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,359, (120 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Aug. 4.	Aug. 11.	Aug. 18.	Aug. 25.
107 Great Towns	9·1	9·0	9·2	8·9
London	9·1	8·3	8·7	8·6
Birmingham	9·4	9·1	9·7	7·8
Liverpool	9·5	10·5	10·0	9·8
Manchester	10·7	8·7	9·8	7·7
Sheffield	8·9	8·0	9·2	8·9
Leeds	9·5	8·5	10·0	8·2
Bristol	7·3	6·9	9·3	10·4
West Ham	8·3	8·6	9·1	8·6

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 53 against 54, 51 and 50 in the preceding three weeks. The deaths of children under two years of age from diarrhoea and enteritis which had been 50, 60, and 68 in the three preceding weeks increased to 89 and included 28 in London, 9 in Liverpool, and 5 each in Croydon and Hull.

In London (Administrative County including the City of London) there were 1,394 live births corresponding to an annual rate of 16·0 per 1,000 living: stillbirths numbered 49 corresponding to a rate of 34 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 752 (8 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 48 against 48, 49, and 43 in the three weeks preceding.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally rectified by the deduction of deaths of non-residents domiciled in Scotland and by the addition of those of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions without the respective areas.

		27	28	

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. p.m., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1913.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P, positive; N, negative; w, weak; m, moderate;

s, strong; V, variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased from 29·85 ins. at the beginning of the week to 29·41 ins. by 2h. on 20th; increased to 29·76 ins. by 9h. on 23rd; decreased to 29·46 ins. by 10h. on 24th; increased and was 29·75 ins. by midnight on the 25th.

STATISTICAL REVIEW.

The Registrar General's Statistical Review of
England and Wales for the Year 1926.

TABLES. PART I. MEDICAL.

This volume of nearly 500 closely printed pages contains classified in 31 separate 'Tables,' a wealth of Statistical data relating to public mortality. The figures given for the year 1926 give exhaustive information relating to the mortality of the population for more than 200 diseases &c. analysed by sex into age groups, together with a mass of other figures on other aspects of public health, e.g., infectious diseases, infant mortality, violent deaths, &c., &c.

Price 15s. net. Post Free 15s. 6d.

TABLES. PART II. CIVIL.

This volume contains the following statistics :—
Populations of United Kingdom and Ireland, British Dominions, Colonies and Possessions, and Foreign Countries; and for England and Wales, Births by sex and legitimacy, Marriages by age and civil condition, Divorces, Parliamentary and Local Government Electors by sex, and particulars of changes in boundary of poor law and administrative areas.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 1st SEPTEMBER, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the five births registered in the thirty-fifth week of the year numbered 6,604 corresponding to an annual rate of 17·5 per 1,000 living: stillbirths numbered 250 corresponding to a rate of 36 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,323, (36 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	Aug. 11.	Aug. 18.	Aug. 25.	Sept. 1.
107 Great Towns	9·0	9·2	8·9	8·8
London	8·3	8·7	8·6	8·8
Birmingham	9·1	9·7	7·8	8·7
Liverpool	10·5	10·0	9·8	9·9
Manchester	8·7	9·8	7·7	9·8
Sheffield	8·0	9·2	8·9	8·5
Leeds	8·5	10·0	8·2	9·9
Bristol	6·9	9·3	10·4	10·0
West Ham	8·6	9·1	8·6	6·3

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 56 against 51, 50 and 53 in the preceding three weeks. The deaths of children under two years of age from diarrhoea and enteritis which had been 60, 68, and 90 in the three preceding weeks fell to 86 and included 23 in London, 9 in Liverpool, and 5 each in Birmingham and Manchester.

In London (Administrative County including the City of London) there were 1,474 live births corresponding to an annual rate of 16·9 per 1,000 living: stillbirths numbered 53 corresponding to a rate of 35 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 766 (14 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 54 against 49, 43, and 48 in the three weeks preceding.

* Population adjusted by the exclusion of non-civilians.
† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally erected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week: those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1913.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and

"lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer.

The symbols employed are:—P. positive; N. negative; w. weak; m. moderate;

s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument

show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased from 29.75 ins. at the beginning of the week

to 29.38 ins. by 22h. on Aug. 26th; increased to 30.08 ins. by 10h. on Aug. 31st; decreased

to 29.99 ins. by 15h. on Sept. 1st; increased and was 30.03 ins. by midnight of the same

day.

1928. No. 36.

THE
REGISTRAR-GENERAL'S

WEEKLY RETURN OF
BIRTHS AND DEATHS

REGISTERED IN COUNTY BOROUGH
AND OTHER GREAT TOWNS AND
OF CASES OF CERTAIN SPECIFIED

INFECTIOUS DISEASES

NOTIFIED IN BOROUGH, URBAN &
RURAL DISTRICTS & PORT SANITARY
DISTRICTS IN ENGLAND AND WALES
DURING THE WEEK ENDED

**SATURDAY, 8TH SEPTEMBER,
1928**

LONDON:

PRINTED AND PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE.

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Adastral House, Kingsway, London, W.C.2; 120, George Street, Edinburgh;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

15, Donegall Square West, Belfast;

or through any Bookseller.

1928.

Price 6d. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 8TH SEPTEMBER, 1923.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the thirty-sixth week of the year numbered 6,516 corresponding to an annual rate of 17·2 per 1,000 living: stillbirths numbered 263 corresponding to a rate of 39 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,567 (244 more than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	Aug. 13.	Aug. 25.	Sept. 1.	Sept. 8.
107 Great Towns	9·2	8·9	8·8	9·5
London	8·7	8·6	8·8	9·5
Birmingham	9·7	7·8	8·7	8·7
Liverpool	10·0	9·8	9·9	10·6
Manchester	9·8	7·7	9·8	10·5
Sheffield	9·2	8·9	8·5	8·7
Leeds	10·0	8·2	9·9	9·1
Bristol	9·3	10·4	10·0	9·2
West Ham	9·1	8·6	6·3	9·4

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 64 against 50, 53 and 56 in the preceding three weeks. The deaths of children under two years of age from diarrhœa and enteritis which had been 68, 89, and 86 in the three preceding weeks rose to 120 and included 39 in London, 10 in Liverpool, and 9 in Birmingham.

In London (Administrative County including the City of London) there were 1,405 live births corresponding to an annual rate of 16·1 per 1,000 living: stillbirths numbered 60 corresponding to a rate of 41 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 827 (61 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 61 against 43, 48, and 54 in the three weeks preceding.

* Population adjusted by the exclusion of non-civilians.
† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week: those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

No of COLUMN	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25

The results apply to the Civil Day or from midnight to midnight. The height of the cistern of the barometer is 152 feet above the mean level of the sea: no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1913.

The readings in columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27 derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer increased generally from 30.03 ins. at the beginning of the week to 30.06 ins. by 9h. on 3rd; decreased to 29.66 ins. by 3h. on 6th; increased to 30.08 ins. by 7h. on 7th; decreased to 29.82 ins. by 15h. on 8th; increased and was 29.86 ins. by midnight on the same day.

DATE.		ELECTRICITY. (For explanation of symbols, see Note.)		GENERAL REMARKS.	
SEPTEMBER.		Registered Sunshine in hours.		Sun above Horizon in hours.	
SUNDAY	2	wP	12.2	13.5	Cloudless, except from 19h. to 20h. Fog about 5h. Heavy dew at night.
MONDAY	3	wP	8.7	13.4	Cloudless till 4h., very cloudy by 5h. Clearing 9h. to little cloud by 10h. Cloud- ing up 15h. to nearly overcast by 16h. Clearing 22h. to nearly cloudless by 23h. Heavy dew and mist in morning. Dew at night.
TUESDAY	4	wP	12.3	13.4	Cloudless throughout. Dew in morning and at night.
WEDNESDAY	5	wP	10.7	13.3	Cloudless generally till 15h., becoming very cloudy generally by 17h. Cloudless period 18h. till 21h., overcast by 0h. Dew and mist in morning.
THURSDAY	6	wP	7.2	13.2	Overcast. Clearing 7h. to little cloud by 8h. Clouding up 13h. to nearly overcast by 14h. Clearing from 17h. to cloudless by 19h. Slight showers at 16h. and about 18h. Dew at night.

STATISTICAL REVIEW.

The Registrar General's Statistical Review of
England and Wales for the Year 1926.

TABLES. PART I. MEDICAL.

This volume of nearly 500 closely printed pages contains classified in 31 separate 'Tables,' a wealth of Statistical data relating to public mortality. The figures given for the year 1926 give exhaustive information relating to the mortality of the population for more than 200 diseases &c. analysed by sex into age groups, together with a mass of other figures on other aspects of public health, e.g., infectious diseases, infant mortality, violent deaths, &c., &c.

Price 15s. net. Post Free 15s. 6d.

TABLES. PART II. CIVIL.

This volume contains the following statistics :—
Populations of United Kingdom and Ireland, British Dominions, Colonies and Possessions, and Foreign Countries; and for England and Wales, Births by sex and legitimacy, Marriages by age and civil condition, Divorces, Parliamentary and Local Government Electors by sex, and particulars of changes in boundary of poor law and administrative areas.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 15TH SEPTEMBER, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the thirty-seventh week of the year numbered 6,369 corresponding to an annual rate of 16·8 per 1,000 living: stillbirths numbered 274 corresponding to a rate of 41 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,378 (188 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	Aug. 25.	Sept. 1.	Sept. 8.	Sept. 15.
107 Great Towns	8·9	8·8	9·5	9·0
London	8·6	8·8	9·5	9·0
Birmingham	7·8	8·7	8·7	8·6
Liverpool	9·8	9·9	10·6	11·2
Manchester	7·7	9·8	10·5	8·4
Sheffield	8·9	8·5	8·7	9·6
Leeds	8·2	9·9	9·1	9·6
Bristol	10·4	10·0	9·2	8·4
West Ham	8·6	6·3	9·4	8·4

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 60 against 53, 56 and 64 in the preceding three weeks. The deaths of children under two years of age from diarrhoea and enteritis which had been 89, 86, and 120 in the three preceding weeks further rose to 125 and included 35 in London, and 15 in Liverpool.

In London (Administrative County including the City of London) there were 1,393 live births corresponding to an annual rate of 16·0 per 1,000 living: stillbirths numbered 55 corresponding to a rate of 33 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 788 (39 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 61 against 48, 54, and 61 in the three weeks preceding.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally rected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of aths of residents reported from elsewhere in Scotland during the week: those in Dublin Registration ea and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions in without the respective areas

SUNDAY .. 9	wP till 14h.; vari- ably wP and sN till 2h.; wP till 6h.; variably sN and mP till 8h.; wP till 15h.; vari- ably wP and wN till 16h.; then wP.	0·2	13·0	Overcast generally. Slight rain at 9h.; 104h.; and 17h. till 174h. Heavy rain 154h till 17h.
MONDAY .. 10		8·2	13·0	Variably cloudy becoming overcast by 184h. Dew in morning. Occasional slight rain between 184h. and 19h.
TUESDAY .. 11	wP	9·3	12·9	Cloudless till 84h.; very cloudy till 194h.; then clearing to cloudless by 194h. Dew in morning and at night. Haze 8h. till 15h.
WEDNESDAY 12	wP	8·7	12·9	Cloudless till 10h.; partially cloudy till 20h.; then cloudless. Slight fog 2h. till 10h. Dew in morning and at night.
THURSDAY 13	wP	7·8	12·8	Cloudless till 4h.; then partially cloudy generally. Mist 2h. till 8h. Solar halo about 8h. Dew in morning and at night.
FRIDAY .. 14	wP	10·5	12·7	Partially cloudy till 194h., then cloud- less. Dew and mist in morning. Dew at night
SATURDAY 15	wP till 74h.; loss of register till 12h.; then wP.	4·5	12·6	Cloudless till 3h.; variably cloudy till 12h.; overcast till 16h.; variably cloudy till 204h.; then cloudless. Mist and dew in morning. Dew at night.
No. of Col. . .	26	Sum 49·2	Sum 89·9	27
			28	

The results apply to the Civil Day or from midnight to midnight.
The height of the cistern of the barometer is 152 feet above the mean level of the sea ;
no correction has been applied to the readings to reduce to sea level.
Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means
of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb
thermometer are converted into mean daily values by the application of corrections
deduced from a discussion of the photographic records made during the 50 years ending
1903. With the corrected mean reading of the dry bulb thermometer is combined the
corrected mean of the readings of the maximum and minimum thermometers, forming
the mean daily value of the temperature of the air (column 8). The mean daily dew
point temperature and degree of humidity are deduced from the mean daily values
of the dry and wet bulb thermometers by Hygrometric Tables, issued by the
Air Ministry.
The average temperature of the air is that derived from a discussion of the observa-
tions made at Greenwich during the 65 years ending 1903, and that of horizontal
movement of the air from a discussion of the anemometric records for the 50 years
ending 1919.
In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and
- "lower" than the average.
The values given in column 17 are not corrected for the index error of the thermo-
meter, which cannot be determined.
The record of Electricity is derived from Thomson's self-registering Electrometer.
The symbols employed are :- F. positive; N. negative; w. weak; m. moderate;
s. strong; v. variable.
The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument
show the aggregate duration of bright sunshine each day.
The reading of the barometer increased generally from 29·85 ins. at the beginning of
the week to 30·18 ins. by 9h. on 13th; decreased to 30·08 ins. by 16h. on 14th; increased
generally and was 30·19 ins. by midnight on the 15th.

England and Wales for the Year 1927.

TABLES. PART I. MEDICAL.

This volume of nearly 500 closely printed pages contains classified in 31 separate 'Tables,' a wealth of Statistical data relating to public mortality. The figures given for the year 1927 give exhaustive information relating to the mortality of the population for more than 200 diseases &c. analysed by sex into age groups, together with a mass of other figures on other aspects of public health, e.g., infectious diseases, infant mortality, violent deaths, &c., &c.

Price 15s. net. Post Free 15s. 6d.

TABLES. PART II. CIVIL.

This volume contains the following statistics :—
Populations of United Kingdom and Ireland, British Dominions, Colonies and Possessions, and Foreign Countries; and for England and Wales, Births by sex and legitimacy, Marriages by age and civil condition, Divorces, Parliamentary and Local Government Electors by sex, and particulars of changes in boundary of poor law and administrative areas.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 22ND SEPTEMBER, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the thirty-eighth week of the year numbered 6,282 corresponding to an annual rate of 16·6 per 1,000 living: stillbirths numbered 286 corresponding to a rate of 44 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,529 (151 more than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Sept. 1.	Sept. 8.	Sept. 15.	Sept. 22.
107 Great Towns	8·8	9·5	9·0	9·4
London	8·8	9·5	9·0	8·9
Birmingham	8·7	8·7	8·6	8·6
Liverpool	9·9	10·6	11·2	10·8
Manchester	9·8	10·5	8·4	9·6
Sheffield	8·5	8·7	9·6	9·2
Leeds	9·9	9·1	9·6	10·8
Bristol	10·0	9·2	8·4	9·3
West Ham	6·3	9·4	8·4	10·4

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 61 against 56, 64 and 60 in the preceding three weeks. The deaths of children under two years of age from diarrhoea and enteritis which had been 86, 120, and 124 in the three preceding weeks further rose to 139 and included 32 in London, 17 in Liverpool, and 13 in Birmingham.

In London (Administrative County including the City of London) there were 1,389 live births corresponding to an annual rate of 15·9 per 1,000 living: stillbirths numbered 46 corresponding to a rate of 32 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 773 (15 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 58 against 54, 61, and 61 in the three weeks preceding.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly figures having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

DATE. SEPTEMBER.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.	
SUNDAY .. 16	WP	4.9	12.6	Overcast till 10 ³⁰ h.; then partially cloudy. Mist and dew in morning and at night.	<p>The results apply to the Civil Day or from midnight to midnight.</p> <p>The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.</p> <p>Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.</p> <p>The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1913.</p> <p>In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.</p> <p>The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.</p> <p>The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P, positive; N, negative; w, weak; m, moderate; s, strong; v, variable.</p> <p>The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.</p> <p>The reading of the barometer decreased generally from 30.19 ins. at the beginning of the week to 30.98 ins. by 10h. on 18th; increased generally to 30.15 ins. by 10h. on 22nd; decreased and was 30.12 ins. by midnight on the same day.</p>
MONDAY .. 17	WP	4.3	12.5	Overcast generally till 1 ¹⁵ h.; then clearing to cloudless by 2 ⁰⁰ h. Mist and dew in morning and at night.	
TUESDAY .. 18	WP	7.6	12.4	Cloudless till 4h.; nearly overcast till 10h.; partially cloudy till 10h.; then cloudless. Heavy dew and mist in morning. Dew at night.

LONDON:

PRINTED AND PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE.

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Adastral House, Kingsway, London, W.C.2; 120, George Street, Edinburgh;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

15, Donegall Square West, Belfast;
or through any Bookseller.

1928.

Price 6d. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 29TH SEPTEMBER, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the thirty-ninth week of the year numbered 6,099 corresponding to an annual rate of 16·1 per 1,000 living: stillbirths numbered 273 corresponding to a rate of 43 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,847 (310 more than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Sept. 8.	Sept. 15.	Sept. 22.	Sept. 29.
107 Great Towns	9·5	9·0	9·4	10·2
London	9·5	9·0	8·9	9·5
Birmingham	8·7	8·6	8·6	10·3
Liverpool	10·6	11·2	10·8	11·5
Manchester	10·5	8·4	9·6	11·0
Sheffield	8·7	9·6	9·2	10·6

West Ham	9·4	8·4	10·4	8·1

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 72 against 64, 60 and 61 in the preceding three weeks. The deaths of children under two years of age from diarrhoea and enteritis which had been 120, 124, and 137 in the three preceding weeks further rose to 160 and included 36 in London, 18 in Liverpool, and 9 in Newcastle-on-Tyne.

In London (Administrative County including the City of London) there were 1,370 live births corresponding to an annual rate of 15·7 per 1,000 living: stillbirths numbered 52 corresponding to a rate of 37 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 824 (51 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 62 against 61, 61, and 58 in the three weeks preceding.

MONTHLY STATEMENT OF DEATHS FROM SMALL-POX.

There was no death from small-pox in the returns received for the month of August last.

Table 1.—107 COUNTY BOROUGHs and
GREAT TOWNS, GREATER LONDON,
and FOUR SCOTTISH and IRISH TOWNS.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1923 except that of Belfast which is the Census figure of 1926 yearly timates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally rected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of aths of residents reported from elsewhere in Scotland during the week: those in Dublin Registration rea and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions om without the respective areas

		27	28	

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1913.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased from 30.12 ins. at the beginning of the week to 29.61 ins. by 0h. on 26th; increased to 29.93 ins. by 9h. on 26th; decreased to 29.42 ins. by 7h. on 28th; increased and was 29.69 ins. by midnight on 26th.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 6TH OCTOBER, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the fortieth week of the year numbered 6,252 corresponding to an annual rate of 16·5 per 1,000 living: stillbirths numbered 278 corresponding to a rate of 43 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,152 (305 more than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Sept. 15.	Sept. 22.	Sept. 29.	Oct. 6.
107 Great Towns	9·0	9·4	10·2	11·0
London	9·0	8·9	9·5	11·1
Birmingham	8·6	8·6	10·3	9·6
Liverpool	11·2	10·8	11·5	12·9
Manchester	8·4	9·6	11·0	10·9
Sheffield	9·6	9·2	10·6	10·8
Leeds	9·6	10·8	11·6	12·7
Bristol	8·4	9·3	8·7	10·1
West Ham	8·4	10·4	8·1	11·7

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 69 against 60, 61 and 72 in the preceding three weeks. The deaths of children under two years of age from diarrhoea and enteritis which had been 124, 137, and 160 in the three preceding weeks fell to 146 and included 32 in London and 20 in Liverpool.

In London (Administrative County including the City of London) there were 1,386 live births corresponding to an annual rate of 15·9 per 1,000 living: stillbirths numbered 39 corresponding to a rate of 27 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 970 (146 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 66 against 61, 58, and 62 in the three weeks preceding.

During the week small-pox was mentioned as a cause of death in one case. This has been provisionally classified to small-pox and assigned to Gateshead C.B.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally rected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions without the respective areas.

‡ As extended 1st Oct. 1928.

§ Including one death from small-pox.

Table 2.—LONDON and certain CITIES in the } BIRTHS and DEATHS for last available

DATE. SEPTEMBER.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.	
SUNDAY .. 30		6.4	11.7	Overcast till 5h.; variably cloudy till 18h.; then cloudless. Rain 0h. till 1h. Dew at night.	<p>The results apply to the Civil Day or from midnight to midnight.</p> <p>The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.</p> <p>Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.</p> <p>The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1906, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1915.</p> <p>In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.</p> <p>The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.</p> <p>The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.</p> <p>The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day. 28.69 ins. at the beginning of the week to 30.16 ins. by 8h. on October 3rd; decreased to 29.79 ins. by 16h. on October 5th; increased and was 30.14 ins. by midnight on October 6th.</p>
OCTOBER. MONDAY .. 1		9.2	11.6	Cloudless. Mist and dew in morning. Slight fog and hoar frost in evening.	
TUESDAY .. 2		0.0	11.5	Overcast. Mist till 9h. Slight fog and heavy dew at night.	
WEDNESDAY 3		7.5	11.4	Very cloudy till 1h.; nearly cloudless till 13h.; partially cloudy till 19h.; then nearly overcast. Slight fog 5h. till 8h. Hoar frost about 6h.	
THURSDAY 4		9.9	11.4	Cloudless generally. Mist and dew in morning, and at night. Hoar frost at night.	
FRIDAY 5		0.6	11.3	Cloudless till 2h.; very cloudy till 6h.; nearly overcast till 18h.; then clearing to cloudless by 19h. Mist and hoar frost in morning.	
SATURDAY 6		7.6	11.3	Overcast till 4h.; then partially cloudy generally. Dew in morning.	<p>Instrument out of action.</p>

REGISTRAR-GENERAL'S

WEEKLY RETURN OF
BIRTHS AND DEATHS

REGISTERED IN COUNTY BOROUGH
AND OTHER GREAT TOWNS AND
OF CASES OF CERTAIN SPECIFIED

INFECTIOUS DISEASES

NOTIFIED IN BOROUGH, URBAN &
RURAL DISTRICTS & PORT SANITARY
DISTRICTS IN ENGLAND AND WALES
DURING THE WEEK ENDED

**SATURDAY, 13TH OCTOBER,
1928**

LONDON:

PRINTED AND PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE.

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Adastral House, Kingsway, London, W.C.2; 120, George Street, Edinburgh;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

15, Donegall Square West, Belfast;

or through any Bookseller.

1928.

Price 6d. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 13TH OCTOBER, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the forty-first week of the year numbered 6,165 corresponding to an annual rate of 16·3 per 1,000 living: stillbirths numbered 282 corresponding to a rate of 44 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,091 (61 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Sept. 22.	Sept. 29.	Oct. 6.	Oct. 13.
107 Great Towns	9·4	10·2	11·0	10·8
London	8·9	9·5	11·1	11·0
Birmingham	8·6	10·3	9·6	10·5
Liverpool	10·8	11·5	12·9	11·6
Manchester	9·6	11·0	10·9	12·3
Sheffield	9·2	10·6	10·8	9·3
Leeds	10·8	11·6	12·7	12·5
Bristol	9·3	8·7	10·1	9·3
West Ham	10·4	8·1	11·7	10·1

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 63 against 61, 72 and 69 in the preceding three weeks. The deaths of children under two years of age from diarrhoea and enteritis which had been 137, 160, and 146 in the three preceding weeks further fell to 102 and included 35 in London and 17 in Liverpool.

In London (Administrative County including the City of London) there were 1,358 live births corresponding to an annual rate of 15·6 per 1,000 living: stillbirths numbered 52 corresponding to a rate of 37 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 957 (13 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 68 against 58, 62, and 66 in the three weeks preceding.

* Population adjusted by the exclusion of non-civilians.
† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly
mates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally
ected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of
ths of residents reported from elsewhere in Scotland during the week: those in Dublin Registration
a and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions
n without the respective areas
† As extended 1st Oct. 1928.

Table 2.—LONDON and certain CITIES in the } BIRTHS and DEATHS for last available
BRITISH EMPIRE and FOREIGN COUNTRIES.

CITIES	POPULATION (enumerated or estimated).	DATE OF RETURN. Week ended	LIVE BIRTHS.	STILLBIRTHS.	DEATHS (excluding Stillbirths).	ANNUAL DEATH-RATE per 1,000 living.	DEATHS FROM					
							Enteric Fever.	Small-pox.	Measles.	Scarlet Fever.	Whooping Cough.	Diphtheria.*

No. of Col. . . .	26	Sum 16·2	Sum 77·0
		27	28

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 123 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1913.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased from 30·15 ins. at the beginning of the week to 29·32 ins. by 15h. on 9th; increased to 29·71 ins. by 20h. on 10th; decreased to 29·36 ins. by 9h. on 11th; increased and was 30·08 ins. by midnight on 13th.

Cloudless till 5h.; very cloudy till 9h.; then nearly overcast. Damping 18h. Dew in morning and at night.

Nearly overcast till 15h.; then variably cloudy. Damping 6h.; 7h.; 9h. and 9h. Heavy dew at night.

Nearly overcast generally till 13h.; then variably cloudy. Rain 4h. till 5h.; at 7h.; 8h. till 9h.; and 20h. till 22h. Thunder 15h. Showers at 10h.; and between 12h. and 13h.

Variably cloudy till 5h.; then overcast generally. Mist in morning. Haze and dew at night. Shower about 24h.

Overcast till 9h.; then variably cloudy. Rain about 3h.; 6h.; and frequently between 8h. and 9h. Damping 1h. and 5h. Brisk wind 9h. till 17h.

Overcast generally till 15h.; partially cloudy till 17h.; then cloudless. Damping 23h. till 10h. Brisk wind 12h. till 16h. Dew at night.

Cloudless till 7h.; overcast till 12h.; then variably cloudy. Slight fog 6h. till 11h.; and from 20h. Hoar frost in morning and at night. Heavy dew at night.

Instrument out of action.

Price 6d. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Poliomyelitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 20TH OCTOBER, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the forty-second week of the year numbered 6,223 corresponding to an annual rate of 16·4 per 1,000 living: stillbirths numbered 265 corresponding to a rate of 41 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,076 (15 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	Sept. 29.	Oct. 6.	Oct. 13.	Oct. 20.
107 Great Towns	10·2	11·0	10·8	10·8
London	9·5	11·1	11·0	10·5
Birmingham	10·3	9·6	10·5	11·6
Liverpool	11·5	12·9	11·6	11·6
Manchester	11·0	10·9	12·3	10·7
Sheffield	10·6	10·8	9·3	9·4
Leeds	11·6	12·7	12·5	11·9
Bristol	8·7	10·1	9·3	11·8
West Ham	8·1	11·7	10·1	9·9

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 60 against 72, 69 and 63 in the preceding three weeks. The deaths of children under two years of age from diarrhoea and enteritis which had been 160, 146, and 102 in the three preceding weeks were again 102 and included 26 in London and 10 in Liverpool.

In London (Administrative County including the City of London) there were 1,390 live births corresponding to an annual rate of 15·9 per 1,000 living: stillbirths numbered 42 corresponding to a rate of 29 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 911 (46 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 66 against 62, 66, and 68 in the three weeks preceding.

MONTHLY STATEMENT OF DEATHS FROM SMALL-POX IN ENGLAND AND WALES.

There was no death from small-pox in the returns received for the month of September last.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ As extended 1st Oct. 1928.

DATE. OCTOBER.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
SUNDAY .. 14		6·7	10·8	Partially cloudy till 11h.; then overcast generally. Fog till 7h., then mist till 12h. Rain from 13h. Hoar frost in morning.
MONDAY .. 15		0·0	10·7	Overcast. Rain till 4h.; and 7h. till 8h. Shower at 13h. Slight damping 19h. till 21h. Mist 7h. till 21h.
TUESDAY .. 16		0·0	10·6	Overcast throughout. Slight rain 11h. till 11h.; and 16h. till 24h.
WEDNESDAY 17		1·4	10·5	Overcast till 13h.; partially cloudy till 20h.; then cloudless. Occasional rain between 6h. and 12h. Dew at night.
THURSDAY 18		2·4	10·5	Cloudless till 2h.; partially cloudy till 9h.; overcast till 19h.; then nearly cloudless. Rain 12h. till 12h.; at 12h.; and generally from 13h. till 18h. Brisk wind 13h. till 20h. Dew in morning.
FRIDAY .. 19		1·3	10·4	Cloudless till 2h.; then clouding up to overcast by 9h. Solar halo 10h. till 14h. Frequent rain between 16h. and 19h.; and from 21h. Brisk wind from 20h.
SATURDAY 20		2·7	10·3	Overcast till 12h.; then partially cloudy. Frequent rain till 9h. Showers at 12h., 13h.; and 18h. Heavy shower, thunder and lightning between 13h. and 14h.
No. of Col. ..	26	27	Sum 73·8	Sum 73·8

The results apply to the Civil Day or from midnight to midnight.
 The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.
 Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.
 The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1913.
 In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.
 The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.
 The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.
 The numbers in column 27 derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.
 The reading of the barometer decreased from 30·08 ins. at the beginning of the week to 29·70 ins. by 5h. on 15h.; increased to 29·08 ins. by 8h. on 16h.; decreased to 29·81 ins. by 13h. on 17h.; increased to 29·43 ins. by 1h. on 18h.; decreased to 29·41 ins. by 16h. on 18h.; increased to 29·61 ins. by 10h. on 19h.; decreased to 29·21 ins. by 2h. on 20th.; increased and was 29·43 ins. by midnight on the same day.

LONDON:

PRINTED AND PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE.

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Adastral House, Kingsway, London, W.C.2; 120, George Street, Edinburgh;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

15, Donegall Square West, Belfast;

or through any Bookseller.

1928.

Price 6d. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute polio-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 27TH OCTOBER, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the forty-third week of the year numbered 6,269 corresponding to an annual rate of 16·6 per 1,000 living: stillbirths numbered 235 corresponding to a rate of 36 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,933 (143 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—			Oct. 6.	Oct. 13.	Oct. 20.	Oct. 27.
107 Great Towns	11·0	10·8	10·8	10·4
London	11·1	11·0	10·5	10·6
Birmingham	9·6	10·5	11·6	9·9
Liverpool	12·9	11·6	11·6	10·7
Manchester	10·9	12·3	10·7	12·1
Sheffield	10·8	9·3	9·4	8·2
Leeds	12·7	12·5	11·9	14·2
Bristol	10·1	9·3	11·8	8·7
West Ham	11·7	10·1	9·9	9·9

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 60 against 69, 63 and 60 in the preceding three weeks. The deaths of children under two years of age from diarrhoea and enteritis which had been 146, 102 and 102 in the three preceding weeks fell to 76 and included 26 in London and 7 in Liverpool.

In London (Administrative County including the City of London) there were 1,342 live births corresponding to an annual rate of 15·4 per 1,000 living: stillbirths numbered 47 corresponding to a rate of 34 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 927 (16 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 54 against 66, 68 and 66 in the three weeks preceding.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly rates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally rected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of the of residents reported from elsewhere in Scotland during the week; those in Dublin Registration a and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions n without the respective areas.

‡ As extended 1st Oct. 1928.

DATE.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.	
OCTOBER.					
SUNDAY .. 21		6.1	10.3	Partially cloudy till 10 ^h .; nearly over- cast till 14 ^h .; then partially cloudy. Heavy showers 12 ^h . to 12 ^h .; at 14 ^h . and 20 ^h . Solar halo 10 ^h . Dew in morning and at night.	
MONDAY .. 22		2.0	10.2	Cloudy till 5 ^h .; then overcast generally. Rain 5 ^h . till 9 ^h .; 13 ^h . till 14 ^h .; from 18 ^h . till 21 ^h .; and 22 ^h . till 23 ^h .	
TUESDAY .. 23		6.9	10.2	Variably cloudy till 15 ^h .; then overcast Damping 21 ^h . till 23 ^h .	
WEDNESDAY 24		5.3	10.1	Variably cloudy till 20 ^h .; then partially cloudy. Rain about 1 ^h .; and frequently between 12 ^h . and 16 ^h .; Damping 6 ^h . till 7 ^h . Brisk wind 8 ^h . till 17 ^h . Lunar halo 20 ^h .	
THURSDAY 25		7.2	10.1	Cloudless till 10 ^h .; cloudy till 16 ^h .; then nearly cloudless. Dew in morning and heavy dew at night.	
FRIDAY .. 26		0.3	10.0	Partially cloudy till 5 ^h .; then overcast. Heavy dew and mist in morning. Shower 14 ^h . Rain from 13 ^h . Brisk wind 11 ^h . till 17 ^h .	
SATURDAY 27		0.1	9.9	Overcast generally. Rain till 1 ^h .; and 6 ^h . till 12 ^h . Brisk wind 8 ^h . till 10 ^h .	
No. of Col. ..	26	Sum 28.4	Sum 70.8		

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9^h. A.M., noon, 3^h. P.M., and 9^h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1904.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer increased from 29.43 ins. at the beginning of the week to 29.48 ins. by 21^h. on 21st; decreased to 29.18 ins. by 21^h. on 22nd; increased to 29.47 ins. by 12^h. on 23rd; decreased to 29.36 ins. by 1^h. on 24th; increased to 29.71 ins. by 10^h. on 25th; decreased to 28.86 ins. by 2^h. on 27th; increased and was 29.38 ins. by midnight on the same day.

Instrument out of action.

BIRTHS AND DEATHS

REGISTERED IN COUNTY BOROUGH
AND OTHER GREAT TOWNS AND
OF CASES OF CERTAIN SPECIFIED

INFECTIOUS DISEASES

NOTIFIED IN BOROUGH, URBAN &
RURAL DISTRICTS & PORT SANITARY
DISTRICTS IN ENGLAND AND WALES
DURING THE WEEK ENDED

**SATURDAY, 3RD NOVEMBER,
1928**

LONDON:

PRINTED AND PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE.

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Adastral House, Kingsway, London, W.C.2; 120, George Street, Edinburgh;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

15, Donegall Square West, Belfast;

or through any Bookseller.

1928.

Price 6d. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 3RD NOVEMBER, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the forty-fourth week of the year numbered 6,522 corresponding to an annual rate of 17·2 per 1,000 living: stillbirths numbered 271 corresponding to a rate of 40 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,855 (78 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

				Oct. 13.	Oct. 20.	Oct. 27.	Nov. 3.
107 Great Towns	10·8	10·8	10·4	10·2
London	11·0	10·5	10·6	10·4
Birmingham	10·5	11·6	9·9	10·2
Liverpool	11·6	11·6	10·7	10·9
Manchester	12·3	10·7	12·1	11·7
Sheffield	9·3	9·4	8·2	8·8
Leeds	12·5	11·9	14·2	8·4
Bristol	9·3	11·8	8·7	10·5
West Ham	10·1	9·9	9·9	8·3

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 56 against 63, 60 and 60 in the preceding three weeks. The deaths of children under two years of age from diarrhoea and enteritis which had been 102, 102 and 76 in the three preceding weeks fell to 68 and included 21 in London.

In London (Administrative County including the City of London) there were 1,437 live births corresponding to an annual rate of 16·5 per 1,000 living: stillbirths numbered 39 corresponding to a rate of 26 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 903 (19 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 44 against 68, 66 and 54 in the three weeks preceding.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally treated by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ As extended 1st Oct. 1928.

DATE. OCTOBER.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
SUNDAY 28		3.1	9.8	Overcast till 11 $\frac{1}{2}$ h.; variably cloudy till 1 $\frac{1}{2}$ h.; then cloudless. Rain 1 $\frac{1}{2}$ h. Damping at 2h. and 4h. Slight fog from 17h.
MONDAY 29		0.0	9.8	Partially cloudy till 6h.; then becoming overcast by 7h. Mist and dew in morning. Slight rain generally 12 $\frac{1}{2}$ h. till 20h.; and at 23h.
TUESDAY 30		4.9	9.7	Overcast generally till 11 $\frac{1}{2}$ h.; partially cloudy till 14 $\frac{1}{2}$ h.; then nearly cloudless. Damping about 9h. and 10h. Rain 10 $\frac{1}{2}$ h. till 11h. Brisk wind 13h. till 15h. Dew at night.
WEDNESDAY 31		5.5	9.7	Cloudless till 9h.; partially cloudy till 15h.; variably cloudy till 21h.; then overcast. Showers 11h.; 11 $\frac{1}{2}$ h. and 12 $\frac{1}{2}$ h. Slight damping 14 $\frac{1}{2}$ h. Mist and heavy dew at night.
NOVEMBER. THURSDAY 1		0.0	9.6	Overcast. Lunar halo 3h. Mist and dew in morning. Damping 20 $\frac{1}{2}$ h. till 20 $\frac{3}{4}$ h.; 21h. till 21 $\frac{1}{2}$ h.; and at 22 $\frac{1}{2}$ h.
FRIDAY 2		0.0	9.6	Overcast throughout. Rain 2 $\frac{1}{2}$ h. and 5 $\frac{1}{2}$ h. Frequent damping between 8 $\frac{1}{2}$ h. and 11h.; 17 $\frac{1}{2}$ h. till 18h.; and from 19h.
SATURDAY 3		2.6	9.5	Overcast till 3h.; very cloudy till 11h.; then overcast generally. Lunar halo 3h. Mist and dew in morning.
No. of Col. . .	26	Sum 16.1	Sum 67.7	

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 162 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 55 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1918.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer increased from 29.38 ins. at the beginning of the week to 29.74 ins. by 7h. on October 29th; decreased to 29.47 ins. by 5h. on October 31st; increased to 29.70 ins. by 10h. on November 1st; decreased to 29.68 ins. by 16h. on November 2nd; increased and was 29.62 ins. by midnight on November 3rd.

Price 6d. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 10TH NOVEMBER, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the forty-fifth week of the year numbered 6,509 corresponding to an annual rate of 17·2 per 1,000 living: stillbirths numbered 277 corresponding to a rate of 41 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,150 (295 more than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Oct. 20.	Oct. 27.	Nov. 3.	Nov. 10.
107 Great Towns	10·8	10·4	10·2	11·0
London	10·5	10·6	10·4	10·6
Birmingham	11·6	9·9	10·2	11·0
Liverpool	11·6	10·7	10·9	11·7
Manchester	10·7	12·1	11·7	11·4
Sheffield	9·4	8·2	8·8	11·6
Leeds	11·9	14·2	8·4	13·8
Bristol	11·8	8·7	10·5	9·2
West Ham	9·9	9·9	8·3	9·4

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 62 against 60, 60 and 56 in the preceding three weeks. The deaths of children under two years of age from diarrhoea and enteritis which had been 102, 76 and 69 in the three preceding weeks rose to 78 and included 16 in London, 12 in Liverpool and 10 in Manchester.

In London (Administrative County including the City of London) there were 1,374 live births corresponding to an annual rate of 15·7 per 1,000 living: stillbirths numbered 45 corresponding to a rate of 32 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 925 (17 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 57 against 66, 54 and 44 in the three weeks preceding.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ As extended 1st Oct. 1928.

No. of Col. . .	26	27	Sum 19.3 Sum 64.9	Sum 28

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 153 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 45 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1915.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer increased generally from 29.02 ins. at the beginning of the week to 29.68 by 8h. on 6th; decreased to 29.54 ins. by 14h. on 7th; increased to 30.05 ins. by 22h. on 8th; decreased and was 29.80 ins. by midnight on the 10th.

Instrument out of action.

EXPLANATORY STATEMENT

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Poliomyelitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 17TH NOVEMBER, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the forty-sixth week of the year numbered 6,158 corresponding to an annual rate of 16·3 per 1,000 living: stillbirths numbered 278 corresponding to a rate of 43 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,274 (124 more than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—			Oct. 27.	Nov. 3.	Nov. 10.	Nov. 17.
107 Great Towns	10·4	10·2	11·0	11·3
London	10·6	10·4	10·6	11·7
Birmingham	9·9	10·2	11·0	8·9
Liverpool	10·7	10·9	11·7	12·3
Manchester	12·1	11·7	11·4	12·7
Sheffield	8·2	8·8	11·6	8·7
Leeds	14·2	8·4	13·8	13·8
Bristol	8·7	10·5	9·2	13·0
West Ham	9·9	8·3	9·4	8·3

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 68 against 60, 56 and 62 in the preceding three weeks. The deaths of children under two years of age from diarrhoea and enteritis which had been 76, 69 and 78 in the three preceding weeks fell to 73 and included 18 in London.

In London (Administrative County including the City of London) there were 1,404 live births corresponding to an annual rate of 16·1 per 1,000 living: stillbirths numbered 58 corresponding to a rate of 40 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,016 (91 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 73 against 54, 44 and 57 in the three weeks preceding.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week: those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ As extended 1st Oct. 1928.

DATE, NOVEMBER.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
SUNDAY	11	0.0	9.1	Overcast. Mist in morning. Rain 15h. till 18h.; 18h. till 19h.; 19h. till 20h.; and from 20h.
MONDAY ..	12	0.0	9.0	Overcast throughout. Rain till 1h. Occasional slight damping between 15h. and 18h. Brisk wind 16h. till 19h.
TUESDAY ..	13	2.9	8.9	Overcast till 13h.; partially cloudy till 15h.; then becoming overcast by 17h. Slight rain about 21h.; and from 23h.
WEDNESDAY	14	5.7	8.9	Overcast till 2h.; partially cloudy till 10h.; then becoming overcast by 12h. Rain till 1h.; from 20h. till 21h.; and occasionally from 21h. Brisk wind fr m 22h.
THURSDAY	15	0.4	8.8	Overcast till 11h.; then variably cloudy. Occasional rain till 14h.; and at 16h. Heavy rain at 4h. Brisk wind till 12h.; becoming high wind 7h. till 8h.
FRIDAY ..	16	1.2	8.8	Variably cloudy till 6h.; overcast till 2h.; then very cloudy. Rain 7h. till 11h.; and occasionally between 15h. and 21h. Brisk wind 10h. till 12h.; high wind till 15h.; gale till 23h., then brisk wind.
SATURDAY	17	5.0	8.7	Variably cloudy becoming cloudless by 10h. Shower 6h. Brisk wind till 4h.; and from 11h.
No. of Col..	..	Sum 15.2	Sum 62.2	26
		27	28	

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. p.m., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1915.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: - F, positive; N, negative; w, weak; m, moderate; s, strong; v, variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased from 29.80 ins. at the beginning of the week to 29.72 ins. by 11h. on 12th; increased to 29.82 ins. by 9h. on 14th; decreased to 29.01 ins. by 14h. on 15th.; increased to 29.18 ins. by 2h. on 16th; decreased to 28.64 ins. by 17h. on 16th; decreased and was 28.62 ins. by midnight on the 17th

THE

THE
REGISTRAR-GENERAL'S

WEEKLY RETURN OF
BIRTHS AND DEATHS

REGISTERED IN COUNTY BOROUGH
AND OTHER GREAT TOWNS AND
OF CASES OF CERTAIN SPECIFIED

INFECTIOUS DISEASES

NOTIFIED IN BOROUGH, URBAN &
RURAL DISTRICTS & PORT SANITARY
DISTRICTS IN ENGLAND AND WALES
DURING THE WEEK ENDED

**SATURDAY, 24TH NOVEMBER,
1928**

LONDON:

PRINTED AND PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE.

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Adastral House, Kingsway, London, W.C.2; 120, George Street, Edinburgh;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

15, Donegall Square West, Belfast;

or through any Bookseller.

1928.

Price 6d. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 24TH NOVEMBER, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the forty-seventh week of the year numbered 5,838 corresponding to an annual rate of 15·4 per 1,000 living: stillbirths numbered 260 corresponding to a rate of 43 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,076 (198 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Nov. 3.	Nov. 10.	Nov. 17.	Nov. 24.
107 Great Towns	10·2	11·0	11·3	10·8
London	10·4	10·6	11·7	9·9
Birmingham	10·2	11·0	8·9	10·5
Liverpool	10·9	11·7	12·3	12·4
Manchester	11·7	11·4	12·7	11·7
Sheffield	8·8	11·6	8·7	10·2
Leeds	8·4	13·8	13·8	10·6
Bristol	10·5	9·2	13·0	9·9
West Ham	8·3	9·4	8·3	9·4

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 63 against 56, 62 and 68 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,370 live births corresponding to an annual rate of 15·7 per 1,000 living: stillbirths numbered 49 corresponding to a rate of 35 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 866 (150 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 52 against 44, 57 and 73 in the three weeks preceding.

MONTHLY STATEMENT OF DEATHS FROM SMALL-POX IN ENGLAND AND WALES.

There was no death from small-pox in the returns received for the month of October last from areas other than the 107 County Boroughs and Great Towns.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally rected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of the of residents reported from elsewhere in Scotland during the week: those in Dublin Registration and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions without the respective areas.

‡ As extended 1st Oct. 1928.

FRIDAY	23	8.5	0.0	Overcast till 14h.; then variably cloudy. Rain 7h. till 9h.; and 16h. till 20h. Occasional damping between 9h. and 16h. Brisk wind 9h. till 10h.; high wind till 11h.; gale till 23h.; then high wind.
SATURDAY	24	8.5	0.4	Nearly overcast generally. High wind till 4h.; gale till 8h.; high wind till 18h.; then brisk wind. Lunar halo 19h. till 24h.
No. of Col.	26	27	28	

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1913.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P, positive; N, negative; w, weak; m, moderate; s, strong; v, variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The readings of the barometer increased from 29.43 ins. by 18h. on 18th; increased to 30.06 ins. by 20h. on 20th.; decreased to 29.65 ins. by 1h. on 22nd; increased to 29.76 ins. by 9h. on 22nd; decreased to 28.85 ins. by 16h. on 23rd; increased to 28.47 ins. by 21h. on 24th; decreased and was 28.44 ins. by midnight on the same day.

Instrument out of action.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute polio-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 1ST DECEMBER, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the forty-eighth week of the year numbered 6,632 corresponding to an annual rate of 17·5 per 1,000 living: stillbirths numbered 296 corresponding to a rate of 43 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,066 (10 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Nov. 10.	Nov. 17.	Nov. 24.	Dec. 1.
107 Great Towns	11·0	11·3	10·8	10·8
London	10·6	11·7	9·9	10·9

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions without the respective areas.

‡ As extended 1st Oct. 1928.

No. of Col..	26	27	28	

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1918.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer.

The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased from 29·44 ins. at the beginning of the week to 28·83 ins. by 12h. on November 25th; increased to 29·47 ins. by 18h. on November 26th; decreased to 29·39 ins. by 2h. on November 27th.; increased to 30·20 ins. by 5h. on November 28th.; decreased to 29·99 ins. by 4h. on November 30th.; increased and was 30·24 ins. by midnight on December 1st.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 8TH DECEMBER, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the forty-ninth week of the year numbered 6,287 corresponding to an annual rate of 16·6 per 1,000 living: stillbirths numbered 287 corresponding to a rate of 44 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,292 (226 more than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	Nov. 17.	Nov. 24.	Dec. 1.	Dec. 8.
107 Great Towns	11·3	10·8	10·8	11·4
London	11·7	9·9	10·9	10·8
Birmingham	8·9	10·5	10·2	11·8
Liverpool	12·3	12·4	10·6	14·1
Manchester	12·7	11·7	13·9	12·8
Sheffield	8·7	10·2	9·1	9·2
Leeds	13·8	10·6	12·1	12·6
Bristol	13·0	9·9	9·9	9·1
West Ham	8·3	9·4	9·6	9·1

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 67 against 68, 63 and 67 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,395 live births corresponding to an annual rate of 16·0 per 1,000 living: stillbirths numbered 51 corresponding to a rate of 35 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 939 (7 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 50 against 73, 52 and 56 in the three weeks preceding.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ As extended 1st Oct. 1928.

DATE, DECEMBER.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours	GENERAL REMARKS.
SUNDAY ..	2	0.0	8.1	Overcast generally. Mist or fog throughout.
MONDAY ..	3	0.0	8.1	Overcast. Very cloudy from 23h. Mist till 9h. then fog till 13h. Rain 1½h. till 2h. from 9h. till 10½h., then intermittent drizzle till 13h.
TUESDAY ..	4	0.6	8.0	Cloudy till 5h.; nearly overcast till 12h., then variably cloudy. Fog from 4h. Hoar frost in morning and at night.
WEDNESDAY	5	0.2	8.0	Thin cloud prevalent till 3½h. overcast till 13½h., clearing to few clouds by 14h. Overcast period 14h. till 17½h., cloudless from 18h. Mist till 20h., then thick fog. Hoar frost in morning and at night.
THURSDAY	6	0.0	8.0	Cloudless till 2h. overcast by 3h. Cloudless from 23½h. Slight rain 12 to 30m. till 12h. 50m. damping 15m. 30m. till 10h. 30m. then rain till 14h. 50m. Fog till 1h. mist or slight fog till 9h. Hoar frost in morning.
FRIDAY ..	7	6.0	8.0	Cloudless or little cloud. Sky hazy during day. Fog 18h. till 23h. Hoar frost in morning and at night.
SATURDAY	8	0.8	7.9	Cloudless generally. Slight fog generally, thicker from 18h. Hoar frost throughout.
No. of Col..	..	Sum 7.6	Sum 56.1	26

The results apply to the Civil Day or from midnight to midnight.
The height of the cistern of the barometer is 182 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.
Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.
The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1918.
In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.
The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.
The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—F. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.
The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.
The reading of the barometer decreased from 30.24 ins. at the beginning of the week to 30.19 ins. by 4h. on December 3rd; increased to 30.29 ins. by 8h. on December 4th; decreased to 29.76 ins. by 16h. on December 5th; increased to 29.83 ins. by 21h. on December 8th; decreased and was 29.92 ins. by midnight of the same day.

**SATURDAY, 15TH DECEMBER,
1928**

LONDON:

PRINTED AND PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE.

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Adastral House, Kingsway, London, W.C.2; 120, George Street, Edinburgh;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

15, Donegall Square West, Belfast;

or through any Bookseller.

1928.

Price 6d. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 15TH DECEMBER, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the fiftieth week of the year numbered 5,973 corresponding to an annual rate of 15·8 per 1,000 living: stillbirths numbered 263 corresponding to a rate of 42 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,829 (537 more than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—			Nov. 24.	Dec. 1.	Dec. 8.	Dec. 15.
107 Great Towns	10·8	10·8	11·4	12·8
London	9·9	10·9	10·8	12·6
Birmingham	10·5	10·2	11·8	11·2
Liverpool	12·4	10·6	14·1	12·9
Manchester	11·7	13·9	12·8	14·4
Sheffield	10·2	9·1	9·2	11·1
Leeds	10·6	12·1	12·6	13·2
Bristol	9·9	9·9	9·1	11·8
West Ham	9·4	9·6	9·1	8·6

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 84 against 63, 67 and 67 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,405 live births corresponding to an annual rate of 16·1 per 1,000 living: stillbirths numbered 45 corresponding to a rate of 31 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1096 (157 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 67 against 52, 56 and 50 in the three weeks preceding.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally erected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ As extended 1st Oct. 1928.

DATE. DECEMBER.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
SUNDAY .. 9		5.2	7.9	Cloudless till 12h., then becoming nearly overcast by 15h. Slight fog till 19h. Hoar frost in morning and at night.
MONDAY .. 10		4.3	7.9	Variably cloudy till 13h.; then overcast. Damping 03h. Solar halo 9h. till 94h. Hoar frost in morning and at night.
TUESDAY .. 11		0.0	7.9	Overcast throughout. Mist from 74h. Slight damping 134h. till 17h. and at 22h.
WEDNESDAY 12		0.0	7.8	Overcast with slight mist throughout. Damping 2h.; sleet 3h. till 5h.; rain 5h. till 12h.; then damping till 23h.
THURSDAY 13		0.0	7.8	Overcast. Rain at 1h. Damping 3h. till 4h. Slight mist till 12h.
FRIDAY .. 14		0.1	7.8	Cloudy till 7h.; nearly cloudless till 11b.; nearly overcast till 164h.; then becoming cloudless by 174h. Fog 8h. till 22h. Hoar frost in morning and at night.
SATURDAY 15		0.0	7.8	Cloudless till 7h.; then becoming overcast by 8h. Fog from 7h. Hoar frost in morning and at night.
No. of Col. . .	26	Sum 9.6	Sum 54.9	

The results apply to the Civil Day or from midnight to midnight.
 The height of the cistern of the barometer is 122 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.
 Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.
 The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 60 years ending 1916.
 In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.
 The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.
 The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.
 The numbers in column 27 derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.
 The reading of the barometer decreased from 29.92 ins. at the beginning of the week to 29.05 ins. by 6h. on 11th; increased generally from 30.18 ins. by 23h. on 15th; decreased and was 30.17 ins. by midnight of the same day.

Instrument out of action.

NOTIFIED IN BOROUGH, URBAN &
RURAL DISTRICTS & PORT SANITARY
DISTRICTS IN ENGLAND AND WALES
DURING THE WEEK ENDED

SATURDAY, 22ND DECEMBER,
1928

LONDON:

PRINTED AND PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE.

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Adastral House, Kingsway, London, W.C.2; 120, George Street, Edinburgh;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

15, Donegall Square West, Belfast;

or through any Bookseller.

1928.

Price 6d. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 22ND DECEMBER, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the fifty-first week of the year numbered 6,234 corresponding to an annual rate of 16·5 per 1,000 living: stillbirths numbered 265 corresponding to a rate of 41 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 5,578 (749 more than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Dec. 1.	Dec. 8.	Dec. 15.	Dec. 22.
107 Great Towns	10·8	11·4	12·8	14·8
London	10·9	10·8	12·6	14·7
Birmingham	10·2	11·8	11·2	14·1
Liverpool	10·6	14·1	12·9	15·8
Manchester	13·9	12·8	14·4	18·1
Sheffield	9·1	9·2	11·1	12·5
Leeds	12·1	12·6	13·2	17·6
Bristol	9·9	9·1	11·8	15·1
West Ham	9·6	9·1	8·6	13·7

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 88 against 67, 67 and 84 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,376 live births corresponding to an annual rate of 15·8 per 1,000 living: stillbirths numbered 37 corresponding to a rate of 26 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1284 (188 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 78 against 56, 50 and 67 in the three weeks preceding.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ As extended 1st Oct. 1928.

DATE.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
DECEMBER.				
SUNDAY .. 16		0.0	7.8	Overcast. Brisk wind 12h. till 21h. Slight damping 15 $\frac{1}{2}$ h. till 17 $\frac{1}{2}$ h.; and at 22h. Rain 17 $\frac{1}{2}$ h. till 20 $\frac{1}{2}$ h.
MONDAY .. 17		2.1	7.8	Overcast till 4h.; partially cloudy till 12h.; cloudless till 17 $\frac{1}{2}$ h.; then nearly overcast. Rain 1 $\frac{1}{2}$ h. till 3h. Mist and dew at night.
TUESDAY .. 18		0.0	7.8	Cloudless till 5h.; then becoming over- cast by 6h. Mist till 5h.; then fog. Gloom 9 $\frac{1}{2}$ h. till 15h.
WEDNESDAY 19		0.1	7.8	Overcast. Fog till 11h.; then mist. Damping generally from 16h.
THURSDAY 20		0.0	7.8	Overcast. Damping 8 $\frac{3}{4}$ h. till 9h.; and 17 $\frac{1}{2}$ h. till 17 $\frac{1}{2}$ h. Rain 9h. till 12 $\frac{1}{2}$ h. Mist and gloom 9h. till 12h.
FRIDAY .. 21		0.3	7.8	Overcast till 1h.; very cloudy till 5h.; cloudless till 16 $\frac{1}{2}$ h.; overcast till 22h.; then partially cloudy. Haze and hoar frost generally. Fog 9h. till 22h.
SATURDAY 22		0.0	7.8	Partially cloudy till 2h.; then becoming overcast by 3h. Hoar frost and mist in morning. Occasional damping 11h. till 16h. Slight rain 18 $\frac{3}{4}$ h. till 20 $\frac{1}{2}$ h.
No. of Col. ..	26	Sum 2.5	Sum 54.6	28

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 162 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1914.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -F, positive; N, negative; w, weak; m, moderate; s, strong; v, variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased from 30.17 ins. at the beginning of the week to 29.77 ins. by 22h. on 16th; increased to 30.34 ins. by 20h. on 18th; decreased to 29.90 ins. by 13h. on 20th; increased to 30.18 ins. by 21h. on 21st; decreased to 30.00 ins. by 18h. on 22nd; increased and was 30.03 ins. by midnight on the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 29TH DECEMBER, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the fifty-second week of the year numbered 4,532 corresponding to an annual rate of 12·0 per 1,000 living: stillbirths numbered 264 corresponding to a rate of 55 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 5,470 (111 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	Dec. 8.	Dec. 15.	Dec. 22.	Dec. 29.
107 Great Towns	11·4	12·8	14·8	14·5
London	10·8	12·6	14·7	14·7
Birmingham	11·8	11·2	14·1	13·0
Liverpool	14·1	12·9	15·8	15·0
Manchester	12·8	14·4	18·3	16·9
Sheffield	9·2	11·1	12·5	14·0
Leeds	12·6	13·2	17·6	17·2
Bristol	9·1	11·8	15·1	15·3
West Ham	9·1	8·6	13·7	14·2

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 86 against 67, 84 and 88 in the preceding three weeks.

In London (Administrative County including the City of London) there were 964 live births corresponding to an annual rate of 11·0 per 1,000 living: stillbirths numbered 41 corresponding to a rate of 41 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,281 (3 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 80 against 50, 67 and 78 in the three weeks preceding.

Note.—The abnormally low number of births registered during the week ended 29th Dec. is mainly due to delay in registration owing to the holidays.

MONTHLY STATEMENT OF DEATHS FROM SMALL-POX IN ENGLAND AND WALES.

There was no death from small-pox in the returns received for the month of November last.

* Population adjusted by the exclusion of non-civilians.

† The population relate to 1923 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week: those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ As extended 1st Oct. 1928.

DATE.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours	Sun above Horizon in hours.	GENERAL REMARKS.
SUNDAY .. 23		0.5	7.8	Cloudy till 1h.; nearly overcast till 9 ⁴⁵ h.; partially cloudy till 1 ³⁰ h.; overcast till 2 ³⁰ h.; then partially cloudy. Mist and dew in morning. Fog from 10h. till 22h.
MONDAY .. 24		0.0	7.8	Partially cloudy till 7h.; then overcast. Damping 1 ⁴⁵ h. till 3 ⁰⁰ h.; then rain. Brisk wind 17h. till 21h.
TUESDAY .. 25		1.3	7.8	Overcast generally till 1 ⁴⁵ h.; partially cloudy till 1 ⁵⁵ h.; then becoming overcast by 1 ⁵⁰ h. Rain till 10 ⁴⁵ h.; and 2 ³⁰ h. till 21h. Slight fog 6h. till 15 ⁴⁵ h. Dew and slight hoar frost in morning. Partial solar halo about 9h. Brisk wind 20h. till 23h.; then high wind.
WEDNESDAY 26		0.0	7.8	Overcast till 1 ⁵⁵ h.; then partially cloudy. Rain 1h. till 2h.; then damping generally till 1 ⁴⁵ h. High wind till 6h.; then brisk wind till 10h. Fog 10h. till 13 ⁴⁵ h. Lunar halo 23h. Dew at night.
THURSDAY 27		0.8	7.8	Partially cloudy till 1 ⁴⁵ h.; then overcast. Lunar halo till 1h. and at 6h. Occasional solar halo between 9h. and 1 ⁴⁵ h. Slight fog 1 ⁴⁵ h. till 18h. Slight rain 20 ⁴⁵ h. till 21 ⁴⁵ h.; then heavy rain.
FRIDAY .. 28		0.0	7.8	Overcast. Rain till 5 ⁴⁵ h.; then slight rain till 8h. Damping 1 ⁴⁵ h. till 22h.
SATURDAY 29		5.4	7.8	Variably cloudy. Rain 1h. till 9h.; at 8 ³⁰ h.; and from 2 ⁴⁵ h. Hoar frost at night.
No. of Col. . . .		Sum 8.0	Sum 54.6	28
		27	26	

The results apply to the Civil Day or from midnight to midnight. The height of the cistern of the barometer is 162 feet above the mean level of the sea: no correction has been applied to the readings to reduce to sea level. Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1913.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; V. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer increased from 30.03 ins. at the beginning of the week to 30.21 ins. by 15h. on 23^d; decreased to 29.80 ins. by 0h. on 2⁴th; increased to 30.08 ins. by 11h. on 25th; decreased to 29.53 ins. by 5h. on 26th; increased to 30.13 ins. by 11h. on 27th; decreased to 29.57 ins. by 5h. on 28th; increased to 29.66 ins. by 17h. on 28th; decreased and was 29.27 ins. by midnight on the 29th.

STATISTICAL REVIEW.

The Registrar General's Statistical Review of
England and Wales for the Year 1927.

TABLES. PART I. MEDICAL.

This volume of nearly 500 closely printed pages contains classified in 31 separate 'Tables,' a wealth of Statistical data relating to public mortality. The figures given for the year 1927 give exhaustive information relating to the mortality of the population for more than 200 diseases, &c. analysed by sex into age groups, together with a mass of other figures on other aspects of public health, e.g., infectious diseases, infant mortality, violent deaths, &c., &c.

Price 15s. net. Post Free 15s. 6d.

TABLES. PART II. CIVIL.

This volume contains the following statistics :—Populations of United Kingdom and Ireland, British Dominions, Colonies and Possessions, and Foreign Countries; and for England and Wales, Births by sex and legitimacy, Marriages by age and civil condition, Divorces, Parliamentary and Local Government Electors by sex, and particulars of changes in boundary of poor law and administrative areas.
